

Montpellier, 17<sup>th</sup> of September 2012,

I worked closely with Ana Herrero on the theme of spatial variability of the vine water status. This research was conducted as part of a project endorsed by Fruition Sciences company which funds the postdoctoral stay of Ana Herrero in the joint research units (ITAP Montpellier SupAgro / Cemagref).

During her stay at Montpellier SupAgro, Ana Herrero was asked to supervise the research project of the master degree students (10 ECTS). These supervisions have been awarded to students in areas related to precision agriculture, localization, metrology and Spatial Analysis (GIS). During these supervisions Ana Herrero has always shown great pedagogical approach either for theoretical concepts that can be complex or to implement these concepts in simple examples, practical but very illustrative and easy to understand for students.

Dr. Bruno TISSEYRE

Associate professor

Montpellier SupAgro (International center for higher education in agricultural sciences)
